

TITLE
BRANCHED POLYOLEFIN SYNTHESIS

ABSTRACT OF THE DISCLOSURE

5 This invention relates to a process for the synthesis of addition
polymers containing branches upon branches and having a polymerizable
olefin end group by a convenient one-pot polymerization of selected vinyl
monomers with chain polymerization initiators and a method to provide
olefinic end groups by chain termination agents; and polymers produced
10 thereby characterized by branch-on-branch structure and lower inherent
viscosity than heretofore possible.
